

BOMBARDIER CARBON OFFSET PROGRAM

BOMBARDIER AND CLIMATECARE HELPING YOU TO REDUCE YOUR CARBON FOOTPRINT

THE PROBLEM

Carbon dioxide and other greenhouse gases are released into the atmosphere whenever fossil fuels are used. Transportation in general has been identified as a major carbon emitter worldwide and aviation in particular is increasingly in the spotlight as a contributor to the growing amount of CO₂ being released in the atmosphere.

This fact is attracting the attention of the media, environmentalists and regulators around the world.

OUR SOLUTION

The Bombardier Carbon Offset Program through ClimateCare, a recognized world-leader in carbon offsetting, is a simple, effective and affordable way to offset the emissions created by your Bombardier business aircraft.

The Process

Using existing data compiled by a third party research firm⁽¹⁾, the volume of CO₂ produced per flight-hour by your aircraft has been calculated. The number of metric tons of carbon produced in a given mission can then be offset, via Voluntary Emission Reduction (VER)⁽²⁾ credits, through Bombardier's unique partnership with ClimateCare.

With offices in the US and the UK, ClimateCare is a leading offset provider that funds and manages projects that reduce greenhouse gases, on behalf of individuals and companies. Rather than investing in single projects, ClimateCare funds a worldwide project portfolio to maximize the impact of your carbon offset investment, while minimizing the risk.

Where Your Funds Go

ClimateCare invests in low-carbon technology projects that focus on three particular areas:

- **Renewable Energy** – finding replacements for non-renewable fuels such as coal, gas and non-renewable wood sources
- **Energy Efficiency** – using less energy to provide the same amount of utility
- **Methane Capture** – turning harmful methane – which produces 23 times the warming of CO₂ – into a useful energy source

Hassle-free Administration

Bombardier Aerospace makes the administration of its Carbon Offset Program easy and seamless. You will be charged a predictable monthly fee, based on a flight hour rate for your aircraft model, that works out to approximately \$30 - \$70 per flight hour⁽³⁾, and we will take care of the rest. Via the same billing system currently used for our *Smart Services™* monthly flight-hour payment programs, such as *Smart Parts Plus™* and *Smart Parts Engine Coverage™*, you need only report the monthly flight-hours to be offset. The total carbon generated from the reported flight hours is then calculated and offset through ClimateCare.

Customers already enrolled in Smart Services will simply see an additional line-item on their monthly invoice. New customers can easily be accommodated on this well-established administrative platform.

(1) Third-party data provided by Conklin and de Decker.

(2) Current program is VER based. Bombardier is evaluating future Certified Emission Reduction (CER) offerings through ClimateCare.

(3) Rates based on 2009 enrollment period.

Through ClimateCare, the Bombardier Carbon Offset Program adheres to strict **project principles**:

Additionality

ClimateCare will only fund a project if it would not have gone ahead without their assistance. This means that all the emissions reductions paid for by your participation in the program go over and above what would have happened without their intervention. This is why ClimateCare chooses to invest in developing countries, as they do not have sophisticated climate change policies in place and are constrained by lack of access to capital.

Avoid Double Counting

All countries that have signed up and ratified the Kyoto Protocol have legally binding targets to reduce their greenhouse gas emissions. We believe that our customers want their money to fund CO₂ reductions that go over and above those that governments are already required to make. That is why ClimateCare funds projects outside countries that have legally binding commitments under the Kyoto Protocol.

Third party verification

For each project, ClimateCare involves a third party responsible for setting out the project baseline. The third party also provides ongoing monitoring to ensure that the expected emission reductions are being made.

Project Standards

All projects funded by ClimateCare are being developed to internationally recognized standards, such as the Voluntary Carbon Standard and Gold Standard Voluntary.

Accountability

For more information and updates on ClimateCare's projects, including case stories, portfolio information and more, please consult the company's website at www.jpmorganclimatecare.com

Based in the UK, with offices in the U.S. and owned by JPMorgan, a leading investment bank, ClimateCare is a world-leading offset provider. Founded in 1997, ClimateCare makes reductions of greenhouse gases such as CO₂ on behalf of individuals and companies. The Funds collected by the Bombardier Carbon Offset Program will be remitted to ClimateCare to be invested in ClimateCare's global portfolio of low carbon technology projects.

TO ENROLL

Please contact a Bombardier Smart Services Representative at 514-855-7766.
